Tab 1

miidle – Master Build & Business Plan

Taglines / Positioning:

- Primary: **miidle — where the work actually happens**
- Secondary: **see how things really get built**
- Tertiary: **the messy middle of building**

Core Mission:

Capture real work, generate structured proof-of-work, create multi-format content automatically, and provide both a spectator and builder experience — while integrating seamlessly with PMO/Ops/Tech workflows.

---

1. Product Overview

1.1 Concept

miidle is a **Work Graph + Execution Capture + Build Story Engine + Spectator Layer** platform designed to:

1. Record and structure work automatically.
2. Turn real work into **multi-format content**: video, audio, visuals, and blog-style write-ups.
3. Provide a **spectator feed** for passive users who want to observe without contributing.
4. Offer **proof-of-work and portfolio capabilities** embedded in the system.
5. Integrate seamlessly with PMO-Ops-Tech systems to become a natural extension of workflow.

1.2 Product Pillars

Pillar	Purpose	Value Proposition
Execution Capture	Record every action and change in real workflows	Raw, structured data that can be converted into proof-of-work and content
Work Graph	Map users, projects, skills, and outputs	Replaces traditional resumes, portfolios, and LinkedIn-style profiles
Build Story Engine	Auto-generate video, audio, visuals, and write-ups	Converts real work into consumable content without user effort
Spectator Layer	Allow observers to view real work	Drives adoption, virality, and curiosity-based engagement
Blog / Write-Up Mode	Optional structured written content	Accommodates camera-shy users or long-form narrative

---

1.3 Differentiation

miidle vs LinkedIn

- No self-reported experience.
- No fluff content.
- Dynamic identity based on real work.

miidle vs YouTube/TikTok

- Content is generated automatically, not created for likes.
- Focused on **process**, not outcomes.

miidle vs Portfolios

- Live, always updating.

- Shows messy middle, failures, iterations.

miidle vs Productivity Tools

- Captures **how work actually happens**, not just tasks.

---

2. System Architecture

2.1 Core Engines

Engine	Function	Key Features
Execution Capture	Track all workflow activity	Passive logging, timestamps, actions, failures, outputs
Work Graph	Map users, skills, projects	Nodes for users, projects, outputs, contributors, skills
Build Story Generator	Convert work → multi-format content	Video, audio, visuals, structured write-ups
Spectator Layer	Feed & discovery for passive users	Filters, tags, outcome metrics, project-level follows

---

2.2 Execution Capture Engine – Detail

Purpose: Capture everything automatically.

Data Captured:

- User ID
- Project ID / Name
- Task ID / Name
- Timestamp
- Action Type (create, edit, delete, automate, decision note)
- Tool / method used (manual vs automation)
- Duration
- Dependencies
- Output artifacts (files, templates, workflow steps)
- Status changes (blocked, in-progress, complete)
- Tags: skill, category, complexity
- Failure/error flags

UX Features:

- Invisible logging by default.
- Optional “Add context” button.
- Toggle for “high-detail logging mode.”

2.3 Work Graph – Detail

Purpose: Replace resumes and portfolios with **dynamic, verified proof of work**.

Components:

- **Timeline** – chronological log of work, filterable.
- **Project Nodes** – title, goal, contributors, timeline, outputs, metrics.
- **Contribution Graph** – shows who worked with whom, what was done, verification via system logs.
- **Skill Proof Layer** – skills inferred from actions, weighted by frequency, complexity, outcomes.

2.4 Build Story Generator – Detail

Purpose: Convert work → consumable content automatically.

Build Story Components:

1. Header (Project title, summary, tags)
2. Problem (auto-generated from tasks/notes)
3. Execution Timeline (key steps, decision points, iterations)
4. Failures/Friction Points (where time lost, errors occurred)
5. Solution (final approach, key components)
6. Outcome (time saved, completion metrics)
7. Assets (workflows, templates, files)

Outputs:

- **Video** – auto-generated, YouTube-ready, 30s / 60s / 3-min options, AI voiceover, workflow visuals
- **Audio** – text-to-voice narration
- **Visual Cards** – before/after, workflow diagrams, metrics
- **Build Write-Up** – structured blog-like content for camera-shy users

---

2.5 Blog / Write-Up Mode – Detail

Purpose: Allow users to generate **long-form structured content** without video.

Strict Constraints:

- No opinion, motivational, or generic advice.
- Must be tied to a real project or work output.
- Mandatory fields: problem, process, failures, successes, outcome.

Flow:

1. Work completed → "Generate Build Story" or "Generate Write-Up"
2. System auto-populates structured fields
3. User edits / adds context if desired
4. Output added to spectator feed

Benefits:

- Inclusive for non-video users
- Generates additional SEO content
- Retains structured proof-of-work

2.6 Spectator Layer – Detail

Feed Rules:

- Shows: Build Stories, Video breakdowns, Build Write-Ups
- Filter by: video / text, industry, skill, outcome
- Outcome badges visible: e.g., "Saved 12 hours/week"

Interactions:

- View full Build Story
- Watch video
- View workflow / template
- Follow project
- Optional "Remix this workflow"

---

3. PMO-Ops-Tech Integration

3.1 Core Principle

miidle extends your PMO system to **capture work and generate proof/content automatically**.

Integration Features:

1. **Convert to Build Story / Write-Up** button in PMO interface
2. **Live Capture Mode** toggle for high-detail logging and spectator visibility
3. **Attach Output Assets** – workflows, templates, files
4. **Cross-linking** – jump between PMO project and Build Story/Write-Up

---

3.2 Data Flow

1. Work happens in PMO system
2. Execution Engine captures actions, decisions, outputs
3. Data structured into Work Graph
4. Build Story Generator converts to video, audio, visuals, or write-up
5. Distributed to internal/external feed

---

4. User Experience

4.1 Onboarding Flow

1. Welcome screen: **"miidle — where the work actually happens"**
2. Example Build Story / Write-Up displayed
3. Optional: "Camera-free mode" onboarding path
4. First project auto-generated Build Story or Write-Up
5. Users shown spectator feed to explore real work

4.2 Builder vs Observer Modes

Mode	Features
Builder	Full logging, Build Story creation, video/audio/export, skill proof, workflow templates
Observer	Feed viewing, filtering, bookmarking, project following, remix insights

---

5. Monetization Strategy

Phase 1 – Free Growth

- Free community, Build Stories, limited exports
- Observers can view feed for free

Phase 2 – Pro / Premium

- Unlimited Build Story generation
- Export video/audio/write-up in multiple formats
- Advanced analytics

Phase 3 – Opportunity Layer

- Collaborator invites, hiring signals, exposure to sponsors

Phase 4 – Enterprise

- Team analytics dashboards
- Workflow benchmarking
- Performance insights
- Integration with corporate PMO systems

---

6. Feature List – Detailed

6.1 User Features

- **Account & Identity:** OAuth login, auto-generated profile from Work Graph
- **Build Story / Write-Up creation:** auto-generated, editable, multi-format
- **Feed Interaction:** scroll, filter, follow projects, save favorites
- **Content Export:** video/audio/text/visuals
- **Notifications:** story ready, project views, workflow reuse

6.2 System Features

- **AI Processing:** summarization, pattern detection, failure detection, timeline compression
- **Data Structuring:** normalize actions, tag skills, map dependencies
- **Content Generation:** script, voice, visuals, SEO-friendly write-ups

---

7. Growth & Go-To-Market Strategy

Niche Focus (Launch)

- PMO / Operations / Automation Builders

Growth Loop

1. User builds → Build Story / Write-Up generated
2. Shared externally → discovery
3. Observers join → convert to builders
4. Repeat

---

8. Future Expansion

- Live build streaming
- AI co-pilot: predictive guidance, “what to do next”
- Workflow marketplace / remix system
- Cross-industry benchmarking dashboards

---

9. Brand Experience

- Taglines applied consistently in app, onboarding, marketing:
  - **Primary:** miidle — where the work actually happens
  - **Secondary:** see how things really get built
  - **Tertiary:** the messy middle of building
- First-time user experience emphasizes:
  - raw work
  - failures
  - real outcomes
  - content generated automatically

---

10. Final Vision

miidle captures the messy middle of work, converts it into proof, content, and opportunities automatically, and allows users to **see how things actually get built**.

- Builders: generate structured proof-of-work and content
- Observers: learn, get ideas, follow projects
- Both feed into growth, monetization, and a potential multi-billion dollar data moat

Analytics should be in the dashboard for contributors.

Tab 2

miidle Full Execution Blueprint

---

1. Database / Schema Design
Goal: Capture every action, project, workflow, and content output in a normalized, queryable format.

1.1 Users Table

Field	Type	Description
user_id	UUID	Primary key
email	string	Login email
oauth_provider	string	Google/Apple/etc.
name	string	Auto-generated full name
profile_picture	string	URL
join_date	datetime	Signup timestamp
role	enum	builder, observer
camera_mode	boolean	true = allows video

1.2 Projects Table

Field	Type	Description
project_id	UUID	PK
title	string	Project title
description	text	Short description
owner_id	UUID	FK → users.user_id
start_date	datetime	
end_date	datetime	
status	enum	planned, in-progress, blocked, complete
tags	array	category, skill, tool
public_visibility	boolean	feed visibility

1.3 Tasks Table

Field	Type	Description

task_id	UUID	PK
project_id	UUID	FK → projects
title	string	
description	text	
assignee_id	UUID	FK → users
start_time	datetime	
end_time	datetime	
status	enum	todo, in-progress, blocked, done
action_logs	array	FK → ExecutionLogs

1.4 ExecutionLogs Table

Field	Type	Description
log_id	UUID	PK
task_id	UUID	FK → Tasks
user_id	UUID	FK → Users
action_type	enum	create, edit, delete, automate, decision
timestamp	datetime	
tool	string	Manual / automation
duration_seconds	integer	Optional
dependencies	array	FK → tasks
output_files	array	FK → Assets
error_flag	boolean	true = failed action

1.5 Assets Table

Field	Type	Description
asset_id	UUID	PK
type	enum	file, workflow, template, screenshot
project_id	UUID	FK

user_id	UUID	FK
url	string	
metadata	JSON	e.g., workflow steps, metrics

1.6 BuildStories Table

Field	Type	Description
story_id	UUID	PK
project_id	UUID	FK
creator_id	UUID	FK → Users
title	string	Auto-generated or edited
summary	text	Generated
content_video	string	URL
content_audio	string	URL
content_writeup	string	URL / Markdown
content_cards	array	Visual cards
tags	array	skill, category, tool
outcome_metrics	JSON	time saved, performance, etc.
status	enum	draft, published

1.7 WriteUps Table

Field	Type	Description
writeup_id	UUID	PK
project_id	UUID	FK
creator_id	UUID	FK
title	string	Auto/edited
context_problem	text	
process	text	Steps, timeline
failures	text	

solutions	text	
outcome	text	Metrics / completion
publish_status	enum	draft, published

1.8 WorkGraph Table

- User nodes, Project nodes, Contribution edges, Skill nodes
- Store relationships for:
  - user → project (role, contribution)
  - project → assets
  - skill → user (weighted by frequency + outcomes)
  - connections → co-contributors

1.9 Feed Table

- story_id / writeup_id / video_id → order in feed
- visibility flags
- filter tags

---

2. UI / UX Screens

2.1 Onboarding Screens

1. Welcome splash: Tagline **"miidle — where the work actually happens"**
2. "Camera mode" selection: default vs text-only mode
3. Quick tutorial: show auto-generated Build Story & Write-Up
4. Feed preview: scroll examples

2.2 Builder Screens

1. **Project Dashboard**
   - Active projects, stats, recent activity
   - Button: "Generate Build Story" / "Generate Write-Up"
2. **Build Story Editor**
   - Auto-filled fields
   - Editable title/summary
   - Upload / attach assets
3. **Write-Up Editor**
   - Structured fields (problem, process, failure, solution, outcome)
   - AI suggestions for clarity / SEO
4. **Content Preview**
   - Video: play preview, adjust voice/timing
   - Audio: listen preview
   - Cards: drag & drop order
5. **Export Options**
   - Download: video, audio, text, cards
   - Share to feed

2.3 Observer Screens

1. Feed view

    - Filter: video / write-up / card
    - Outcome badges visible
2. Project Detail
    - Timeline, contributors, assets
    - Optional: “Follow project” / “Bookmark”
3. Search / Discovery
    - Filter by skill, industry, tool, outcome

2.4 Profile Screens

- Builder: Work Graph visualization, skill proof, Build Stories, Write-Ups
- Observer: Saved projects, followed projects

2.5 Notifications

- “Your Build Story is ready”
- “Project gained new views”
- “Someone reused your workflow”

---

3. First 10 Example Build Stories & Write-Ups
[Example Data – Project “Automate Reporting”]

1. **Build Story Video**
    - Title: Automate Reporting Workflow
    - Summary: Replaced manual reporting with automated dashboards in 1 week
    - Steps: Identify tasks → design workflow → automate → test → deploy
    - Failures: Initial API connection errors
    - Outcome: Saved 12 hours/week, 3x faster reporting
2. **Write-Up Version**
    - Context/Problem: Reporting required manual extraction and emailing
    - Process: Mapped current workflow → automated with script → QA → deploy
    - Failures: API downtime, permission errors
    - Solution: Added retry logic and error handling
    - Outcome: 12 hours/week saved, all reports automated

(Repeat similar 9 projects covering design, ops, PMO, IT automation, content creation, etc.)

---

4. Multi-format Content Generation Logic
4.1 Video Generation

- Input: Build Story / Write-Up
- Steps:
    1. Extract key timeline events
    2. Generate AI script
    3. Map visuals: workflow screenshots, charts, icons
    4. Text-to-speech narration
    5. Video rendering (30s/60s/3min)

4.2 Audio Generation

- Input: Build Story or Write-Up
- Steps:
    1. Script selection
    2. Voice model selection (friendly/professional)

3. Output MP3/stream

4.3 Visual Cards

- One card per key step/failure/outcome
- Auto-layout: title + metric + icon
- Export: PNG / PDF

4.4 Build Write-Ups

- Input: structured fields
- Output: Markdown / HTML / PDF
- Optional AI rewriting for clarity / SEO

4.5 Conversion Rules

- Video ↔ Audio ↔ Write-Up ↔ Cards
- Single source of truth: Work Graph + Execution Logs

---

5. Observer vs Builder UX Flows

5.1 Builder Flow

1. Login → select camera mode
2. Create project in PMO → auto-log actions
3. Generate Build Story / Write-Up
4. Edit, attach assets, review
5. Publish to feed or share externally
6. Track metrics, receive notifications

5.2 Observer Flow

1. Login → default to feed
2. Browse feed → filter (video/write-up)
3. Bookmark, follow, or view workflow
4. Optional: convert to builder by linking PMO account
5. Receive notifications when projects update

5.3 Conversion Loop

- Observer sees a Build Story → intrigued → signs up → creates own project → becomes Builder

Tab 3

1. Brand & Naming Uniqueness

- **Name tweaks:** Keep **miidle**, but play with stylization:
  - miidle → lowercase, minimal, clean font (like Figma or Notion)
  - Add a subtle glyph/icon in the logo: a "loop" or "path" representing the messy middle of work.
- **Tagline reinforcement:** Always visible in the app:
  - "miidle — where the work actually happens"
- **Color palette:** Avoid typical social app colors. Go for:
  - Muted, professional tones with one bold accent (e.g., teal + graphite, or orange + slate)
  - Gradient used sparingly for highlights/animations
- **Typography:** Choose a typeface that feels approachable but structured — modern sans-serif, not corporate.

---

2. UI / UX Uniqueness

1. **Feed design:**
   - Instead of a traditional linear feed, use **"project cards in a path"** — shows the journey visually (like a timeline or storyboard).
   - Hover / expand → reveal step-by-step timeline.
2. **Builder dashboard:**
   - Instead of a grid of projects, show **"Work Graph Nodes"** — visual network connecting users → projects → skills.
   - Use interactive nodes to make navigation fun, not just a table.
3. **Observer feed interaction:**
   - Allow **"peek into the middle"**:
     - Start with a blurred video/thumbnail of a project step
     - Click to gradually reveal process stages
     - Encourages curiosity and "wow" factor
4. **Content style:**
   - Video: minimalistic overlays, animated icons, text highlights for failures & wins
   - Cards: color-coded by outcome (green = success, red = failure, yellow = learning)
   - Write-Ups: structured like a **"work diary" or work portfolio (not resume)** with collapsible sections

---

3. Interaction Uniqueness

- **Gamification / micro-feedback:**
  - "Observers can react with insight badges" — e.g., "Learned something," "Remix idea," "Follow process"
- **Non-linear storytelling:**
  - Show work as a **branching path** (timeline + decision tree)
  - Users can explore "what went wrong" vs "what worked" as separate tracks
- **Discovery / Remix:**
  - Observers or other builders can click "Remix this workflow" → generate a template for their own project
  - Encourages engagement, not just passive scrolling

---

4. Visual Design Language

- **Icons:** Custom, line-based with subtle gradients
- **Illustrations:** Abstract workflow / network visuals instead of stock photos

- **Animations:** Micro-interactions when:
    - A project completes
    - A Build Story is generated
    - A workflow node expands
- **UI microcopy:** playful but professional, e.g., “Your messy middle looks great here”

---

5. Multi-format Content Uniqueness

- Build Story videos:
    - Animated timeline highlighting failures and wins
    - Auto-captioned, voice + visual + text cards
- Write-Ups:
    - **Collapsible sections**, “peek” into failures or deep dives
    - Use “progress markers” like a roadmap rather than a blog scroll

---

6. Suggested Unique Features / “Secret Sauce”

1. **Peek Mode:** Viewers can only see partial steps of a workflow initially, unlock details by engaging.
2. **Failure Highlights:** Every Build Story emphasizes mistakes equally with wins → unique authenticity angle.
3. **Auto Visual Graphs:** Turn a project’s Work Graph into interactive mini-infographics.
4. **Hybrid Content Cards:** Swipeable cards that combine write-ups, video snippets, and visuals for multi-sensory consumption.
5. **Mystery Project Mode:** Showcase anonymized projects to attract spectators just curious about “what’s happening behind the scenes.”

Modern, sleek design: Think Figma / Notion / Pitch-level aesthetic
Clean, minimalistic visuals: Lots of white space, subtle gradients, professional typography
Dynamic UI mockups: Realistic phone or desktop frames, not flat diagrams
Infographic-style flows: Hierarchies, badges, and content pipelines should be visually engaging and “polished”
Cohesive branding: miidle color palette integrated with icons, badges, and UI elements

Tab 4

miidle User Tiers & Privileges

---

1. Community Member (Free)
Goal: Maximize adoption and visibility while growing the spectator base.
Entry Path:
- One-click plugin installation → auto-deploy
- No PMO integration required

Features:
- View public Build Stories and Write-Ups
- Explore observer feed
- Filter content by industry, skill, or project type
- Bookmark and follow projects
- Optional notifications for favorite projects
- Limited interactions (cannot generate Build Stories on own)

Purpose / Value:
- Brings eyeballs to content
- Generates curiosity → potential conversion to contributor or integrator
- Freemium marketing funnel

---

2. Contributor (Paid / Semi-Premium)
Goal: Enable content creation and reputation-building within miidle.
Entry Path:
- Signup as a contributor → link to PMO / Ops / Tech-ops work OR standalone project creation

Features:
- Full Build Story / Write-Up generation (video/audio/text/cards)
- Editable structured projects
- Export content for LinkedIn, YouTube, internal sharing
- Access to basic analytics:
    - Views per project
    - Engagement metrics (bookmarks, follows)
- Participate in community events
- Optional “camera-free” content generation for write-ups

Purpose / Value:
- Builds portfolio/reputation
- Converts work into content automatically
- Incentivizes contributors with visibility

---

3. PMO / Ops / Tech-Ops Integration (Special Tier / Spotlight)
Goal: Reward users connecting via real work systems and enable deep integration.
Entry Path:
- One-click PMO / Tech-Ops integration → system captures execution logs automatically

Features / Privileges:
- Automatic Build Story / Write-Up generation from real projects
- Spotlight in community feed: “Verified Builder” or “Work Highlight” badge
- Priority placement in feed for observers (increased visibility)
- Advanced analytics:
    - Time saved metrics
    - Outcome-based performance indicators

        - Skill graphs and contribution network
- Team leaderboard / recognition within company
- Access to advanced “Remix this workflow” templates
- Early access to platform updates, beta features

Purpose / Value:

- Encourages enterprise adoption
- Provides social proof and credibility
- Drives higher engagement for contributors

miidle Updated Pricing & Contributor Model

---

1. Community Member (Free / Spectator Tier)
Price: $0
Features:

- Observer feed access (view public Build Stories / Write-Ups)
- Follow projects, bookmark favorites
- Limited filtering (industry, skill)
- Notifications for favorite projects
- **Purpose:** Build the spectator base, funnel to contributors

---

2. Contributor (Freemium Model)
Base / Free Features (Essential AI)

- Full contribution capability (create Build Stories / Write-Ups)
- Auto-capture from PMO/Ops/Tech tasks (basic logging)
- Generate basic multi-format content:
    - Write-Up (text-based)
    - Visual Cards (basic)
- Basic analytics:
    - Project views
    - Engagement metrics (bookmarks, follows)

Paid / Premium Features ($10–$20/month)

- Advanced AI content generation:
    - Video generation (multi-length, AI voiceovers)
    - Audio output (podcast-style narration)
    - Enhanced Visual Cards (animated / infographic style)
- Advanced analytics:
    - Time saved metrics
    - Skill weighting / proof-of-work metrics
- Spotlight / Trust Badges:
    - Verified Contributor
    - Community Spotlight
    - Workflow Innovator
- Early access / beta features
- Additional content export credits

Goal / Value:

- Free tier keeps contribution frictionless → drives adoption
- Paid tier monetizes power users and those who want visibility and advanced content

---

3. PMO / Ops / Tech-Ops Integration (Enterprise / Spotlight Tier)

Price: Custom (Team-Based)
Features / Privileges:

- Full auto Build Story / Write-Up generation directly from integrated systems
- Spotlight visibility and guaranteed placement in feed
- Advanced analytics dashboards:
    - Team performance
    - Time saved
    - Contribution network
- Access to "Remix Workflow" templates
- Trust / Verified badges for team members
- Beta features & early access

Purpose / Value:

- Drives enterprise adoption
- Monetizes teams while rewarding visibility
- Encourages network effects in the community

---

4. Badges & Reputation System
Purpose: Incentivize engagement, trust, and visibility. Badges are visible in profiles and in feed.
Badge Examples:

Badge	Earned By	Visibility
Verified Contributor	Linking real work / PMO integration	Community feed & profile
Spotlight Creator	Most-engaged Build Story in the last month	Feed highlight
Workflow Innovator	High-impact workflow or template reused by others	Profile & feed
Early Adopter	Signup within first 3 months	Profile only
Camera-Free Pro	Frequent write-up / blog-mode contributions	Profile & feed

Mechanics:

- Badges can unlock perks:
    - Priority feed placement
    - Additional analytics
    - Access to premium remix templates
- Encourages free users to upgrade for recognition

---

5. Summary – Contributor Flow

1. **Free Contributor:**
    - Can create & post Build Stories / Write-Ups
    - Limited export & analytics
    - Can earn badges via engagement
2. **Premium Contributor ($10–$20/month):**
    - Unlock advanced AI features (video/audio)
    - Enhanced analytics
    - Spotlight / trust badges with feed visibility

    - Optional content export credits
3. **PMO / Ops Integration:**
    - Auto-build content from real work
    - Enterprise analytics, team visibility, verified badges

Key Advantages of This Structure:

- Low barrier to contribution → fast network growth
- Free contributors still generate content → strengthens feed for observers
- Paid perks focus on **visibility, recognition, and advanced outputs**
- Badges create gamified credibility → encourages upgrades organically

---

4. Tier Comparison Table

Feature / Tier	Community Member	Contributor	PMO/Ops Integration
Join type	Free	Paid / linked projects	Enterprise / linked systems
Feed access	✓	✓	✓
Build Story generation	✗	✓	✓
Write-Up generation	✗	✓	✓
Video / Audio export	✗	✓	✓
Card visuals	✗	✓	✓
Analytics	✗	Basic	Advanced (time, skills, contributions)
Spotlight visibility	✗	Optional	Guaranteed / Featured
PMO integration	✗	Optional	Required / full auto-capture
Community events	Limited	✓	✓
Remixed workflow templates	✗	Limited	Full access

---

5. Incentive Strategy

- **Community Members:** Free → curiosity → upgrade to Contributor
- **Contributors:** Generate content → visibility → upgrade to PMO Integration for spotlight
- **PMO Integration:** Incentivizes enterprise adoption → larger network effect → drives viral credibility

Optional Viral Hook:

- Every Build Story generated by PMO-integrated contributor → snippet automatically visible to free community members → encourages signups.

---

6. Plugin / Auto-Deploy Mechanism

- **One-click install:** Users can deploy miidle plugin to PMO/Ops system instantly
- **Auto-detect work:** System logs tasks, updates, decisions in the background
- **Zero friction:** User continues working normally; miidle captures and structures content
- **Optional opt-in:** Users can decide which projects are public / feed-visible

---

Tab 5

miidle Master Blueprint – Updated with Tiers, Badges, and Freemium Contributor Flow

---

1. User Tiers & Roles

1.1 Community Member (Free / Spectator)

- **Price:** $0
- **Access:** Observer feed only
- **Features:**
  - View public Build Stories & Write-Ups
  - Follow and bookmark projects
  - Filter feed by industry, skill, or project type
  - Notifications for favorite projects
- **Purpose:** Grow audience, funnel into contributors or premium upgrades

---

1.2 Contributor (Freemium / Paid)

Base Free Tier:

- Create & post Build Stories / Write-Ups
- Auto-capture basic PMO/Ops/Tech tasks
- Generate essential multi-format content:
  - Text Write-Up
  - Basic Visual Cards
- Basic analytics: views, bookmarks, follows
- Earn badges via engagement

Paid Premium Tier ($10–$20/month):

- Unlock advanced AI-generated content:
  - Video Build Stories (AI voiceovers, timeline animations)
  - Audio narration of stories
  - Enhanced Visual Cards (animated / infographic style)
- Advanced analytics:
  - Time saved metrics
  - Skill weighting / proof-of-work metrics
- Spotlight / Trust Badges:
  - Verified Contributor
  - Community Spotlight
  - Workflow Innovator
- Early access / beta features
- Extra content export credits

Flow:

- Free contributors → create content → earn badges → incentivized to upgrade for visibility & analytics

---

1.3 PMO / Ops / Tech-Ops Integration (Enterprise / Spotlight)

- **Price:** Custom, team-based
- **Access:** Auto-build content from linked systems
- **Features:**
  - Automatic Build Story / Write-Up generation
  - Spotlight feed placement
  - Advanced analytics dashboards (team & individual metrics)
  - Remix workflow templates access

    - Verified / Trust badges automatically assigned
    - Beta / early-access features
- **Purpose:** Enterprise adoption, credibility, network effect

---

2. Badge & Reputation System

Badge Mechanics:

- Displayed on profile & in feed for recognition
- Can unlock perks (spotlight placement, analytics, premium templates)

Badge Examples:

Badge	Earned By	Visibility / Perk
Verified Contributor	PMO integration / verified work	Spotlight feed & profile
Spotlight Creator	Most engaged Build Story last month	Feed highlight
Workflow Innovator	High-impact workflow reused	Profile & feed
Early Adopter	Signup in first 3 months	Profile only
Camera-Free Pro	Frequent write-up contributions	Profile & feed

---

3. Database / Schema Updates for Tiers & Badges

- **Users Table:**
    - tier (enum): community, contributor_free, contributor_paid, enterprise
    - badges (array): list of badge IDs
    - premium_features_unlocked (boolean)
- **Badges Table:**

Field	Type	Description
badge_id	UUID	PK
name	string	Badge name
description	text	How to earn it
perk	JSON	Feed placement, analytics access, etc.
visibility_scope	enum	profile_only, feed_highlight, both
- **Content Tables:**
    - Add visibility_level (free, premium, enterprise) to enforce feature access

---

4. UI / UX Updates

4.1 Onboarding Screens

- **Tier Selection:**
    - Community → explore feed
    - Contributor → start free, highlight premium features
    - Enterprise → connect PMO/Ops system
- **Badge preview:** Display potential badges users can earn

4.2 Builder Dashboard

- Free contributors: basic editor & analytics

- Premium contributors: unlock **video/audio generation**, **enhanced visual cards**, **advanced analytics**
- Badge display: show earned and potential badges, hover → explanation

---

4.3 Observer Feed

- Community members see free stories
- Free contributors see free stories + some premium content previews
- Premium content highlighted with **premium badge icons** (e.g., Verified Contributor, Spotlight Creator)

4.4 Notification & Engagement Flow

- Alert users when:
  - A badge is earned
  - A project they contributed to gets featured / reused
  - New premium feature unlocked
- Incentivizes both **free & paid contributors** to stay active

---

5. Multi-format Content Generation

- Free contributors → **text & basic visual cards**
- Premium contributors → **video & audio outputs**, enhanced card animations
- Enterprise → automatic generation from PMO/Ops tasks
- Badges / tiers **control access** to content outputs

---

6. Monetization Flow

1. **Free Contributors → Premium Contributors ($10–$20/month)**
   - Unlock AI-driven outputs, analytics, spotlight visibility
2. **Enterprise / PMO Integration**
   - Auto-capture content
   - Spotlight placement & advanced analytics
3. **Upsells / Extras**
   - Extra content export credits
   - Custom branded Build Story templates
   - Premium analytics dashboards

---

7. Growth & Engagement Strategy with Tiers

- **Community Members:** Free → observers → curious → upgrade to contributor
- **Contributors:** Free → badges earned → premium features unlocked → increased visibility
- **Enterprise:** Teams adopt → automatic content generation → platform becomes essential workflow tool
- **Viral Hooks:**
  - Badge-triggered spotlight feed placement
  - Observers see snippets of premium Build Stories → conversion to contributor

---

This version **fully integrates freemium contributor access, paid premium features, badges, and enterprise integration** into the app logic. It's ready for:

- **UI/UX flows**
- **Database implementation**
- **Content generation rules**

- **Growth & monetization strategy**

Tab 6

MASTER BLUEPRINT: miidle – COMPLETE VISUAL & STRATEGIC PLAN

---

1. Tier Hierarchy & Access
Diagram:
Community Member (Free) → Contributor (Free) → Contributor (Premium $10-$20/mo) → PMO/Enterprise Integration
Details:

- Community Member: View feed, follow/bookmark projects, notifications
- Contributor Free: Create Build Stories/Write-Ups, basic analytics, earn badges
- Contributor Premium: Advanced AI outputs (video/audio/cards), enhanced analytics, spotlight badges
- PMO/Enterprise: Auto Build Story generation, verified badges, full analytics, feed priority

---

2. Badge & Reputation System
Diagram: Badge flow from achievement → profile & feed visibility → unlock perks
Examples:

- Verified Contributor: PMO-integrated, feed & profile highlight
- Spotlight Creator: Most engaged project, feed highlight
- Workflow Innovator: Reused workflow, profile & feed
- Camera-Free Pro: Frequent write-up contributions
- Early Adopter: Signup first 3 months, profile only

Perks: Spotlight placement, premium analytics, template access

---

3. Feed & Content Flow
Observer Feed:

- Free content preview → curiosity → Contributor upgrade
- Badge icons visible on premium posts

Contributor Feed:

- Free contributors: basic post creation & visibility
- Premium: advanced content, analytics dashboard, spotlight placement

Enterprise Feed:

- Verified projects automatically highlighted
- Metrics display (time saved, impact)

Flowchart: Observer → Free Contributor → Premium Contributor → Enterprise visibility

---

4. UI/UX Screens (Annotated)
Onboarding:

- Tier selection with badge preview
- Camera mode choice (video / text-only)
- Quick tutorial of feed & Build Story generation

Builder Dashboard:

- Free contributors: basic editor, analytics
- Premium contributors: unlock video/audio, enhanced visual cards, advanced analytics
- Badge display with hover tooltip

Observer Feed:

- Filter by project type, skill, industry
- Free content + snippets of premium posts for curiosity

Notifications:

- Badge earned alerts
- Spotlight project updates
- New premium feature unlocks

---

5. Database / Schema Mapping
Tables Updated for Tiers & Badges:
- Users: tier, badges[], premium_features_unlocked
- Badges: badge_id, name, description, perk, visibility_scope
- Content Tables: visibility_level (free, premium, enterprise)

Multi-format Content Mapping:
- Free contributors: text, basic visual cards
- Premium contributors: video, audio, enhanced cards
- Enterprise: auto-generation from PMO/Ops tasks

---

6. Multi-format Content Generation Rules
Free Contributors:
- Text Write-Ups
- Basic Visual Cards

Premium Contributors:
- Video Build Stories (AI narration + animation)
- Audio narration (podcast-style)
- Enhanced visual cards (infographic/animated)
- Advanced analytics

Enterprise:
- Full automation from PMO/Ops system
- Spotlight & verified badges
- Advanced dashboard metrics

---

7. Monetization & Pricing Flow
Free Contributors: Base AI features, earn badges, visibility incentive
Premium ($10-$20/mo): Unlock advanced AI content, spotlight, analytics
Enterprise / PMO Integration: Custom pricing, auto content generation, verified badges, team analytics
Upsells: Extra content exports, custom branded templates, premium analytics dashboards
Flowchart: Observer → Free Contributor → Premium Contributor → Enterprise integration → Viral hooks via badges & feed spotlight

---

8. Growth Strategy & Viral Hooks
- Free observers see snippets of premium content → drives conversion to contributor
- Badges create gamified recognition → encourages engagement and upgrades
- Enterprise integration → auto-generate content → showcase workflows → network effects
- Remixed workflows templates → content re-use → community collaboration

---

9. Visual Notes & Branding
- Color Palette: Muted professional tones + single bold accent
- Typography: Modern sans-serif, approachable yet structured
- Feed: Interactive timeline / path visualization
- Build Story cards: Color-coded by outcome (green success, red failure, yellow learning)
- Animations: Micro-interactions on milestone, badge earned, project complete

- Logo: miidle, minimal, lowercase, subtle loop glyph

---

10. Launch-Ready Implementation
Key Deliverables:

- Fully annotated UI/UX screens
- Database & schema ready for tier & badge implementation
- Multi-format content generation pipeline defined
- Monetization & freemium contributor flow integrated
- Visual branding & feed differentiation
- Viral hooks / growth strategy incorporated

This master blueprint is **ready to hand to design & dev teams** for immediate implementation.
