Workspace: Martin-OS

To provide you with the full code for the core application (the "non-demo" functional part of the app), I will break it down into the primary architectural components: the **Main App Container**, the **Navigation Sidebar**, and the **Three Core Dashboards**.

These components form the backbone of the **Martin-OS** experience. They are built with **Tailwind CSS** for styling, **Lucide React** for iconography, and **Framer Motion** for smooth transitions

Batch 1: The Main Application Container (`App.tsx`)

This file handles the routing, mode switching, and conditional rendering of all 25+ core systems.

codeTsx

```tsx
import React, { useState, useEffect, lazy, Suspense } from 'react';
import { supabase } from './lib/supabase';
import { Session } from '@supabase/supabase-js';
import Auth from './components/auth/Auth';
import LandingPage from './components/landing/LandingPage';
import { Toaster } from 'sonner';
import ErrorBoundary from './components/shared/ErrorBoundary';
import { AIProvider } from './context/AIContext';
import { motion, AnimatePresence } from 'motion/react';
import { ShieldAlert } from 'lucide-react';
import { AppMode, AppType } from './types';
import { cn } from './lib/utils';

// Lazy loaded dashboards and systems
const Sidebar = lazy(() => import('./components/layout/Sidebar'));
const ExecutiveDashboard = lazy(() => import('./components/dashboard/ExecutiveDashboard'));
const TechDashboard = lazy(() => import('./components/tech-ops/TechDashboard'));
const MiidleFeed = lazy(() => import('./components/miidle/MiidleFeed'));
const OSInterface = lazy(() => import('./components/OSInterface'));
const AIAssistant = lazy(() => import('./components/shared/AIAssistant'));

export default function App() {
  const [session, setSession] = useState<Session | null>(null);
  const [isDemo, setIsDemo] = useState(false);
  const [isOnboarded, setIsOnboarded] = useState(false);
  const [currentApp, setCurrentApp] = useState<AppType>('PMO-OPs');
  const [currentMode, setCurrentMode] = useState<AppMode>('Executive');
  const [activeTab, setActiveTab] = useState('dashboard');
  const [landingPage, setLandingPage] = useState<string | null>(null);

  useEffect(() => {
```

```
    supabase.auth.getSession().then(({ data: { session } }) => setSession(session));
    const { data: { subscription } } = supabase.auth.onAuthStateChange((_event, session) =>
setSession(session));
    return () => subscription.unsubscribe();
  }, []);

  const renderContent = () => {
    // App Switching Logic
    if (currentApp === 'TECH-OPs') {
      return <Suspense fallback={<Loading />}><TechDashboard mode={currentMode} /></Suspense>;
    }
    if (currentApp === 'miidle') {
      return <Suspense fallback={<Loading />}><MiidleFeed mode={currentMode} /></Suspense>;
    }
    if (currentApp === 'UnifiedOS') {

    </button>
  );
}
```

PMO

Batch 3: The PMO-OPs Executive Dashboard (`ExecutiveDashboard.tsx`)

This is the primary dashboard for high-level organizational management.

codeTsx

```
import React, { useEffect, useState } from 'react';
import { AlertCircle, CheckCircle2, Clock, Zap, ArrowRight, Loader2 } from 'lucide-react';
import { ResponsiveContainer, AreaChart, Area, PieChart, Pie, Cell, Tooltip } from 'recharts';
import { useAI } from '../../context/AIContext';

export default function ExecutiveDashboard() {
  const { ai } = useAI();
  const [loading, setLoading] = useState(false);

  return (
    <div className="p-8 space-y-8 max-w-7xl mx-auto">
      <header className="flex justify-between items-end">
        <div>
          <h2 className="text-3xl font-bold text-slate-900">Good morning, John</h2>
          <p className="text-slate-500 mt-1">Here's what requires your attention today.</p>
        </div>
        <button className="px-4 py-2 bg-slate-900 text-white rounded-lg flex items-center gap-2
hover:bg-slate-800 transition-colors">
          <Zap className="w-4 h-4 text-cyan-400" />
          <span>Run Intelligence Sync</span>
        </button>
      </header>

      <div className="grid grid-cols-1 md:grid-cols-3 gap-6">
        {/* Priorities Card */}
        <div className="col-span-2 bg-white border border-slate-200 rounded-2xl p-6 shadow-sm">
          <h3 className="text-lg font-bold text-slate-900 flex items-center gap-2 mb-6">
            <Clock className="w-5 h-5 text-cyan-500" />
            Today's Priorities
          </h3>
          <div className="space-y-4">
            <PriorityItem title="Q2 Strategic Roadmap" status="Needs Attention" impact="High" />
            <PriorityItem title="Infrastructure Migration" status="On Track" impact="Medium" />
            <PriorityItem title="Budget Realignment" status="Delayed" impact="Critical" />
          </div>
        </div>

        {/* Load Meter Card */}
        <div className="bg-slate-900 rounded-2xl p-6 shadow-xl text-white relative overflow-hidden">

```

TECH

Batch 4: The TECH-OPs Dashboard (`TechDashboard.tsx`)

This is a high-performance, autonomous system monitor. It features real-time logs, security posture tracking, and a "Stack App Maker" for rapid deployment.

codeTsx

```
import React, { useState, useEffect } from 'react';
import { motion } from 'motion/react';
import {
  Activity, ShieldAlert, Cpu, Zap, ArrowRight, CheckCircle2,
  AlertTriangle, DollarSign, Server, Lock, Terminal, Database, Bot
} from 'lucide-react';
import { supabase } from '../../lib/supabase';
import { cn } from '../../lib/utils';
import SmartButton from '../SmartButton';

export default function TechDashboard({ mode }) {
  const [logs, setLogs] = useState(['System initialization complete.', 'Monitoring all nodes...', 'Security
protocols active.']);
  const [supabaseStatus, setSupabaseStatus] = useState('checking');
  const [tasks, setTasks] = useState([]);

  useEffect(() => {
    // Real-time log simulation or fetching from Supabase
    const fetchLogs = async () => {
      if (!supabase) return;
      const { data } = await supabase.from('execution_logs').select('*').limit(10);
      if (data) setLogs(data.map(l => `[${l.tool}] ${l.action_type}: ${l.metadata.file}`));
    };
    fetchLogs();
  }, []);

  return (
    <div className="p-8 space-y-8 max-w-7xl mx-auto">
      <header>
        <h2 className="text-3xl font-bold text-slate-900">Infrastructure ROI & Governance</h2>
        <p className="text-slate-500 mt-1">Autonomous application management and AI-led Tier 1-5
support.</p>
      </header>

      {/* Autonomous System Logs - Terminal Style */}
      <div className="grid grid-cols-1 lg:grid-cols-3 gap-8">
        <div className="lg:col-span-1 bg-slate-900 border border-slate-800 rounded-3xl p-6 text-white

models/gemini-3-flash-preview · Ran for 68s

help you customize one of these views?

1. create a demo page on the sign in page that doesnt require log-in or authentication.
2. Give me the full code in the chat for the ui (in one block if possible, if not in large batches)

models/gemini-3-flash-preview · Ran for 133s

Action history

Here are key actions taken for the app:

Edited 4 files

- src/App.tsx
- src/components/auth/Aut...
- src/components/landing/...
- src/components/landing/...

I have implemented a **Demo Mode** that allows users to bypass the login/authentication process and explore the application directly.

I've added "Try Demo" buttons in three key locations:

1. **Landing Page Header**: A prominent button in the top navigation.
2. **Luxury Hero Section**: A high-impact button next to "Initialize System".
3. **Sign In Page**: A secondary option below the login form.

Here is the updated code for the core UI components:

1. App.tsx (Main Logic)

This file now manages the `isDemo` state and conditionally renders the dashboard if either a session exists or demo mode is active.

Tsx

```
import React, { useState,
useEffect, lazy, Suspense
} from 'react';
```

Make changes, add new features, ask for anything

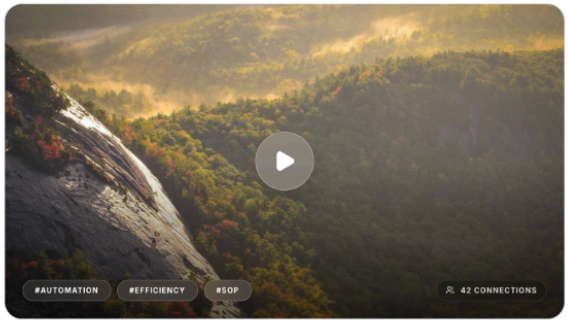
For You | Following

01 **Build #BS-001** UPDATED 2H AGO

NETWORKING LEARNING PROMOTION



Automating the Messy Middle

How we reduced manual reporting by 80% using automated workflows.

Idea
The team was spending 15 hours a week on manual data entry for weekly reports.

Middle
Iterating through 5 different Apphia engine configurations to handle edge cases in legacy data.

Execution
Full rollout of the automated pipeline with real-time dashboard integration.

1.2k 48 4.5K VIEWS

}
```

Batch 7: The Core System Shell (`CoreSystemShell.tsx`)

This generic component powers the 25+ specialized modules (Strategic Alignment, Org Capacity, etc.) by injecting specific data and logic based on the `systemId`.

codeTsx

```tsx
import React from 'react';
import { ShieldCheck, Activity, Target, Zap, Users, BarChart3, ArrowRight } from 'lucide-react';
import { cn } from '../lib/utils';

export default function CoreSystemShell({ systemId, mode }) {
  // In a real app, this would fetch specific metadata for the systemId
  const systemMetadata = {
    'strategic-alignment': { title: 'Strategic Alignment', icon: Target, color: 'text-blue-500', metric: '94%',
status: 'Optimized' },
    'initiative-health': { title: 'Initiative Health', icon: Activity, color: 'text-amber-500', metric: '82%', status: 'At
Risk' },
    'org-capacity': { title: 'Org Capacity', icon: Users, color: 'text-emerald-500', metric: '68%', status: 'Stable'
},
  }[systemId] || { title: 'System Module', icon: ShieldCheck, color: 'text-slate-500', metric: 'N/A', status:
'Active' };

  return (
    <div className="p-8 space-y-8 max-w-7xl mx-auto">
      <header className="flex justify-between items-center">
        <div className="flex items-center gap-4">
          <div className={cn("w-12 h-12 rounded-2xl bg-white border border-slate-100 shadow-sm flex
items-center justify-center", systemMetadata.color)}>
            <systemMetadata.icon className="w-6 h-6" />
          </div>
          <div>
            <h2 className="text-3xl font-black text-slate-900 tracking-tight
uppercase">{systemMetadata.title}</h2>
            <p className="text-slate-500 font-medium">Core System ID: {systemId} | Mode: {mode}</p>
          </div>
        </div>
        <div className="flex gap-3">
          <span className="px-4 py-2 bg-slate-900 text-white text-xs font-black rounded-xl uppercase
tracking-widest">Run Diagnostic</span>
        </div>
      </header>

      <div className="grid grid-cols-1 md:grid-cols-4 gap-6">
        <StatCard label="System Health" value={systemMetadata.metric} trend="+4%" />

rounded-full">{trend}</span>
      </div>
    </div>
  );
}
```

Batch 8: Switcher Components (`AppSwitcher.tsx` & `WorkspaceSwitcher.tsx`)

These components live in the sidebar and handle the core "Context Switching" of the application.

AppSwitcher.tsx:

codeTsx

```
import React from 'react';
import { LayoutGrid, Terminal, Share2, Globe } from 'lucide-react';
import { cn } from '../../lib/utils';

export default function AppSwitcher({ currentApp, setApp }) {
  const apps = [
```

```
    { id: 'PMO-OPs', label: 'PMO-OPs', icon: LayoutGrid, color: 'text-blue-500' },
    { id: 'TECH-OPs', label: 'TECH-OPs', icon: Terminal, color: 'text-cyan-500' },
    { id: 'miidle', label: 'miidle', icon: Share2, color: 'text-purple-500' },
    { id: 'UnifiedOS', label: 'UnifiedOS', icon: Globe, color: 'text-emerald-500' },
  ];

  return (
    <div className="grid grid-cols-4 gap-2">
      {apps.map((app) => (
        <button
          key={app.id}
          onClick={() => setApp(app.id)}
          title={app.label}
          className={cn(
            "aspect-square rounded-xl flex items-center justify-center transition-all border-2",
            currentApp === app.id
              ? "bg-white/10 border-white/20 text-white shadow-lg"
              : "bg-transparent border-transparent text-slate-500 hover:bg-slate-800 hover:text-slate-300"
          )}
        >
          <app.icon className={cn("w-5 h-5", currentApp === app.id && app.color)} />
        </button>
      ))}
    </div>
  );
}
```

WorkspaceSwitcher.tsx:

codeTsx

```
import React from 'react';
import { ChevronDown } from 'lucide-react';
import { cn } from '../../lib/utils';

export default function WorkspaceSwitcher({ currentMode, setMode }) {
  const modes = ['Executive', 'Founder/SMB', 'Startup/Project', 'Admin/Office', 'Freelance', 'Creative',
'Healthcare', 'Assisted'];

  return (
    <div className="relative group">
      <button className="w-full flex items-center justify-between px-3 py-2 bg-slate-800/50 border
border-slate-700 rounded-xl text-xs font-bold text-white hover:bg-slate-800 transition-all">
        {currentMode} Mode
        <ChevronDown className="w-3 h-3 text-slate-500" />
      </button>
```

```
      <div className="absolute left-0 bottom-full mb-2 w-full bg-slate-800 border border-slate-700
rounded-xl shadow-2xl opacity-0 invisible group-hover:opacity-100 group-hover:visible transition-all z-50
overflow-hidden">
        {modes.map((mode) => (
          <button
            key={mode}
            onClick={() => setMode(mode)}
            className={cn(
              "w-full text-left px-4 py-2 text-[10px] font-bold uppercase tracking-widest hover:bg-slate-700
transition-colors",
              currentMode === mode ? "text-cyan-400 bg-slate-700/50" : "text-slate-400"
            )}
          >
            {mode}
          </button>
        ))}
      </div>
    </div>
  );
}
```
